

# ADM Bag in Bag Solution

ADM Packaging Technology are the new agents for the Matrix range of VFFS bag making machines. Matrix Packaging Machinery is a US-based company and is regarded as one of the largest and most reputable suppliers of baggers in North America. With a big range on hand they virtually have every style of bag maker needed for the market.

The pro-series bag in bag introduced by Matrix Packaging Machinery is an innovative idea offering a smart process to repack bags and reduce eliminate materials handling. It packs smaller bags into the larger bag all in the one machine. This reduces downtime and totally eliminates rehandling of the small packs.

The advantage the pro series bag in bag offers over previous methods is the reduced space needed to produce the finished product. Only one capital investment is needed instead of purchasing two baggers.

Prior to the introduction of the Pro series bag in bag, past methods are expensive and force the costs to be passed onto the consumers. By eliminating the materials handling and storage space needed before repacking into larger bags we also eliminate competition and introduce profits in the business.
