

ADM-X240 VFFS is Competitive

The ADM-X240 supplied by a ADM Packaging Technology is a budget priced machine with rich qualities. It is equipped with all the well-known product technology and parts locally available.

The PLC used is a Panasonic product offering high end quality program control and investment security over unknown brands. The ADM-X240 is custom-built as a standard bagger to ADM specification. The provisions made by a ADM make this up-gradable from a standard model to a special purpose machine for applications to include zipper interface, four edge seal, valve application and more.

A Panasonic Servo motor is used to control the film pull for precision films feed and managed motion control offering a better transporting drive over inverter control or brake clutch motors. A Panasonic Servo motor is also used to drive the end seal on the ADMX-240 for again better motion control and bag sealing results over pneumatics. It also offers the advantage to increased bag speeds. The ADMX-240 also contains a motorised rear carriage, adjustment for film positioning to assist in reducing setup time during changeover.

The ADM-X240 is constructed in stainless steel providing all the advantages required in the food industry. With speeds up to 100 bags per minute, it is a work horse priced to suit most small to medium-sized operations.
